Learning model	**Project Based Learning**	
Program Learning Outcomes (PLO)	**PLO study program that is charged to the course**	
	PLO-5	Work independently and in groups
	PLO-14	Science and engineering knowledge
	Program Objectives (PO)	
	PO - 1	a. Ability to identify specific facts about mathematics, science, and engineering required for measurement principles, calibration techniques, and the use of measuring tools in the manufacturing industry
	PO - 2	a. Able to design experimental plans
	PO - 3	a. Able to formulate problems identifying measurement principles, calibration techniques, and the use of measuring tools in the manufacturing industry and analyzing obstacles.
	PO - 4	a Be able to identify the necessary techniques, skills and tools of modern engineering practice for a particular situation.

Short Course Description	This course provides students with experience in understanding the concepts, theory and application of metrology, measurement principles, calibration techniques, and the use of measuring instruments in the manufacturing industry including direct and indirect measuring instruments, based on good and correct SOPs. Learning is carried out using demonstration, virtual, discussion and active collaboration methods between students and lecturers, both individually and in groups, accompanied by tasks to support understanding the lecture material.

Week-	Final abilities of each learning stage (Sub-PO)	Evaluation		Help Learning, Learning methods, Student Assignments, [Estimated time]		Learning materials [References]	Assessment Weight (%)
		Indicator	Criteria & Form	Offline (*offline*)	Online (*online*)		
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
1	Students are able to communicate their understanding of mechanical measurements	1. Students are able to understand mechanical measurements 2. Get to know how to take measurements in general 3. Students are able to understand standards, dimensions and units of measurement	**Criteria:** Mastery of material, communication skills, analysis results **Form of Assessment** : Participatory Activities	Model: Problem Based Learning / Learning Based on Problems Method: Lecture, simulation, discussion, problem solving, question and answer 2 X 50		**Material:** measurement systems, units of quantity, standards, calibration **References:** *[1] Thomas G, Beckwith (2007) Mechanical measurements, Sixth Edition, Pearson Prentice Hall, New Jersey*	3%
2	Able to understand how to use digital techniques for mechanical measurements	Definition of static & dynamic characteristics of measurement instruments (accuracy, precision, sensitivity, linearity, error and frequency response)	**Criteria:** According to the Rubric **Form of Assessment** : Participatory Activities	Model: Problem Based Learning / Learning Based on Problems Method: Lecture, simulation, discussion, problem solving, question and answer 2 X 50	Model: Problem Based Learning / Learning Based on Problems Method: Lecture, simulation, discussion, problem solving, question and answer 2 X 50	**Material:** Static & dynamic characteristics of measurement instruments (accuracy, precision, sensitivity, linearity, error and frequency response) **References:** *[2] Richard S. Figliola and Donald E. Beasley (2011) Theory and Design for Mechanical Measurements, Fifth Edition, John Wiley & Sons, New York.*	3%

3	Able to understand how to use digital techniques for mechanical measurements	Understand the use of digital methods and how to digitize mechanical input. Understand the basic elements of digital circuits. Understand number systems. Can explain simple digital circuit schemes. Know and understand microprocessors and microcomputers. The influence of analog to digital (A/D) and digital to analog (D/A).)	**Criteria:** mastery of material, communication skills **Form of Assessment** : Participatory Activities	Model: Problem Based Learning / Learning Based on Problems Method: Lecture, simulation, discussion, problem solving, question and answer 2 X 50	Model: Problem Based Learning / Learning Based on Problems Method: Lecture, simulation, discussion, problem solving, question and answer 2 X 50	**Material:** Sensor and transducer systems **References:** *[3] JP Holman (2012) Experimental Methods for Engineers, Eighth Edition, McGraw-Hill, New York.* **Material:** Sensor and transducer systems **References:** *[4] Rochim, Taufiq. 2004. Metrology Specifications and Geometric Quality Control. Bandung: Gramedia*	3%
4	Able to know and understand dimensional measurements	Able to understand and be skilled at measuring dimensions	**Criteria:** mastery of material, communication skills **Form of Assessment** : Participatory Activities	Model: Problem Based Learning / Learning Based on Problems Method: Lecture, simulation, discussion, problem solving, question and answer 2 X 50		**Material:** Dimensional measurements **References:** *[2] Richard S. Figliola and Donald E. Beasley (2011) Theory and Design for Mechanical Measurements, Fifth Edition, John Wiley & Sons, New York.* **Material:** Dimensional measurements **References:** *[4] Rochim, Taufiq. 2004. Metrology Specifications and Geometric Quality Control. Bandung: Gramedia*	3%

5	Able to know and understand measurements of displacement, strain, force, torque, speed and acceleration	Can understand the measurement of displacement, strain, force, torque, speed and acceleration.	**Criteria:** mastery of material, communication skills **Form of Assessment** : Participatory Activities	Model: Problem Based Learning / Problem Based Learning Method: Lecture, simulation, discussion, problem solving, question and answer 2 X 50		**Material:** Measurement of displacement, strain, force, torque, speed and acceleration. **References:** *[2] Richard S. Figliola and Donald E. Beasley (2011) Theory and Design for Mechanical Measurements, Fifth Edition, John Wiley & Sons, New York.* **Material:** Measurement of displacement, strain, force, torque, speed and acceleration. **References:** *[4] Rochim, Taufiq. 2004. Metrology Specifications and Geometric Quality Control. Bandung: Gramedia*	3%
6		Understand the concept of measuring temperature, fluid flow and pressure.	**Criteria:** mastery of material, communication skills **Form of Assessment** : Participatory Activities	Model: Problem Based Learning / Problem Based Learning Method: Lecture, simulation, discussion, problem solving, question and answer 2 X 50		**Material:** Measurement of temperature, fluid flow and pressure. **References:** *[3] JP Holman (2012) Experimental Methods for Engineers, Eighth Edition, McGraw-Hill, New York.*	3%
7	Know and understand the processing and presentation of measurement data.	Understand the concept of processing and presenting measurement data.	**Criteria:** mastery of material, communication skills **Form of Assessment** : Participatory Activities	Model: Problem Based Learning / Problem Based Learning Method: Lecture, simulation, discussion, problem solving, question and answer 2 X 50		**Material:** Processing and presenting measurement data **References:** *[3] JP Holman (2012) Experimental Methods for Engineers, Eighth Edition, McGraw-Hill, New York.* **Material:** Processing and presenting measurement data **References:** *[4] Rochim, Taufiq. 2004. Metrology Specifications and Geometric Quality Control. Bandung: Gramedia*	3%

8	Material: Chapter at Meetings 2-7	USS-Sub Summative Exam/UTS Midterm Exam	**Criteria:** USS-Sub Summative Exam/UTS Midterm Exam	USS-Sub Summative Exam/UTS Midterm Exam 2 X 50		**Material:** All material at meetings 1-7 **References:** *[4] Rochim, Taufiq. 2004. Metrology Specifications and Geometric Quality Control. Bandung: Gramedia*	20%
9	Know and understand the processing and presentation of measurement data.	USS-Sub Summative Exam/UTS Midterm Exam	**Criteria:** mastery of material, communication skills, completeness of reports, analysis results **Form of Assessment** : Participatory Activities	Model: Problem Based Learning / Learning Based on Problems Method: Lecture, simulation, discussion, problem solving, question and answer 2 X 50		**Material:** All material at meetings 1-7 **References:** *[4] Rochim, Taufiq. 2004. Metrology Specifications and Geometric Quality Control. Bandung: Gramedia* **Material:** Processing and presenting measurement data **References:** *[2] Richard S. Figliola and Donald E. Beasley (2011) Theory and Design for Mechanical Measurements, Fifth Edition, John Wiley & Sons, New York.* **Material:** Processing and presenting measurement data **References:** *[2] Richard S. Figliola and Donald E. Beasley (2011) Theory and Design for Mechanical Measurements, Fifth Edition, John Wiley & Sons, New York.*	3%

10	Know and understand the processing and presentation of measurement data.	Understanding error classification Understanding the treatment of systematic uncertainty and single snapshots of discussion Understanding uncertainty propagation	**Criteria:** mastery of material, communication skills, analysis results **Form of Assessment** : Participatory Activities	Model: Problem Based Learning / Learning Based on Problems Method: Lecture, simulation, discussion, problem solving, question and answer 2 X 50		**Material:** Processing and presenting measurement data. **References:** *[2] Richard S. Figliola and Donald E. Beasley (2011) Theory and Design for Mechanical Measurements, Fifth Edition, John Wiley & Sons, New York.* **Material:** Processing and presenting measurement data. **References:** *[4] Rochim, Taufiq. 2004. Metrology Specifications and Geometric Quality Control. Bandung: Gramedia*	3%
11	Know and understand the classification of tools and geometric measurement methods	Understand the classification of tools and geometric measurement methods	**Criteria:** mastery of material, communication skills **Form of Assessment** : Project Results Assessment / Product Assessment	Model: Problem Based Learning / Problem Based Learning Method: Lecture, simulation, discussion, problem solving, question and answer 2 X 50		**Material:** Classification of tools and geometric measurement methods **Reference:** *[5] Munadi. 1988. Basics of Industrial Metrology. Jakarta: Depdikbud: Director General of Higher Education, LPTK Development Project* **Material:** Classification of geometric measurement tools and methods **References:** *[1] Thomas G, Beckwith (2007) Mechanical measurements, Sixth Edition, Pearson Prentice Hall, New Jersey*	20%

12	Know and understand linear, angular, flatness measurements	Understand and be skilled at linear, angular, flatness measurements	**Criteria:** mastery of material, communication skills **Form of Assessment** : Project Results Assessment / Product Assessment	Model: Problem Based Learning / Problem Based Learning Method: Lecture, simulation, discussion, problem solving, question and answer 2 X 50		**Material:** Linear measurements, angles, flatness **References:** *[4] Rochim, Taufiq. 2004. Metrology Specifications and Geometric Quality Control. Bandung: Gramedia* **Material:** Linear measurements, angles, flatness **References:** *[2] Richard S. Figliola and Donald E. Beasley (2011) Theory and Design for Mechanical Measurements, Fifth Edition, John Wiley & Sons, New York.*	20%
13	Know and understand roundness measurements and shape errors	Know and understand roundness measurements and shape errors	**Criteria:** mastery of material, skilled use of tools, skilled communication **Form of Assessment** : Participatory Activities, Project Results Assessment / Product Assessment	Model: Problem Based Learning / Problem Based Learning Method: Lecture, simulation, discussion, problem solving, question and answer 2 X 50		**Material:** Measurement of roundness and shape errors **References:** *[4] Rochim, Taufiq. 2004. Metrology Specifications and Geometric Quality Control. Bandung: Gramedia* **Material:** Measurement of roundness and shape errors **References:** *[2] Richard S. Figliola and Donald E. Beasley (2011) Theory and Design for Mechanical Measurements, Fifth Edition, John Wiley & Sons, New York.*	20%

14	Know and understand qualitative control charts	Know and be skilled at making qualitative control charts	**Criteria:** mastery of material, communication skills **Form of Assessment** : Project Results Assessment / Product Assessment	Model: Problem Based Learning / Problem Based Learning Method: Lecture, simulation, discussion, problem solving, question and answer 2 X 50		**Material:** Qualitative control diagrams **References:** *[1] Thomas G, Beckwith (2007) Mechanical measurements, Sixth Edition, Pearson Prentice Hall, New Jersey* **Material:** Qualitative control diagram **References:** *[4] Rochim, Taufiq. 2004. Metrology Specifications and Geometric Quality Control. Bandung: Gramedia*	9%
15	Know and understand quantitative control diagrams	Know and be skilled at making quantitative control charts	**Criteria:** mastery of material, communication skills **Form of Assessment** : Participatory Activities		Model: Problem Based Learning / Problem Based Learning Method: Lecture, simulation, discussion, problem solving, question and answer 2 X 50	**Material:** Quantitative control diagrams **References:** *[2] Richard S. Figliola and Donald E. Beasley (2011) Theory and Design for Mechanical Measurements, Fifth Edition, John Wiley & Sons, New York.* **Material:** Quantitative control diagram **References:** *[4] Rochim, Taufiq. 2004. Metrology Specifications and Geometric Quality Control. Bandung: Gramedia*	4%
16	Material: Chapter at Meetings 9-15	US-Summative Exam/UAS Final Semester Exam	**Criteria:** US-Summative Exam/UAS Final Semester Exam	US-Summative Exam/UAS Final Semester Exam 2 X 50		**Material:** Material at meeting 9-15 **References:** *[3] JP Holman (2012) Experimental Methods for Engineers, Eighth Edition, McGraw-Hill, New York.* **Material:** Material at meeting 9-15 **References:** *[4] Rochim, Taufiq. 2004. Metrology Specifications and Geometric Quality Control. Bandung: Gramedia*	30%

Evaluation Percentage Recap: Project Based Learning

No	Evaluation	Percentage
1.	Participatory Activities	41%
2.	Project Results Assessment / Product Assessment	59%

	100%

Notes

1. **Learning Outcomes of Study Program Graduates (PLO - Study Program)** are the abilities possessed by each Study Program graduate which are the internalization of attitudes, mastery of knowledge and skills according to the level of their study program obtained through the learning process.
2. **The PLO imposed on courses** are several learning outcomes of study program graduates (CPL-Study Program) which are used for the formation/development of a course consisting of aspects of attitude, general skills, special skills and knowledge.
3. **Program Objectives (PO)** are abilities that are specifically described from the PLO assigned to a course, and are specific to the study material or learning materials for that course.
4. **Subject Sub-PO (Sub-PO)** is a capability that is specifically described from the PO that can be measured or observed and is the final ability that is planned at each learning stage, and is specific to the learning material of the course.
5. **Indicators for assessing** ability in the process and student learning outcomes are specific and measurable statements that identify the ability or performance of student learning outcomes accompanied by evidence.
6. **Assessment Criteria** are benchmarks used as a measure or measure of learning achievement in assessments based on predetermined indicators. Assessment criteria are guidelines for assessors so that assessments are consistent and unbiased. Criteria can be quantitative or qualitative.
7. **Forms of assessment:** test and non-test.
8. **Forms of learning:** Lecture, Response, Tutorial, Seminar or equivalent, Practicum, Studio Practice, Workshop Practice, Field Practice, Research, Community Service and/or other equivalent forms of learning.
9. **Learning Methods:** Small Group Discussion, Role-Play & Simulation, Discovery Learning, Self-Directed Learning, Cooperative Learning, Collaborative Learning, Contextual Learning, Project Based Learning, and other equivalent methods.
10. **Learning materials** are details or descriptions of study materials which can be presented in the form of several main points and sub-topics.
11. **The assessment weight** is the percentage of assessment of each sub-PO achievement whose size is proportional to the level of difficulty of achieving that sub-PO, and the total is 100%.
12. TM=Face to face, PT=Structured assignments, BM=Independent study.
